

4. Using Microsoft Excel, create a progress report for a group of students who have completed a specific assignment. Your report should include:

- A list of students' names or IDs in Column A.
- The completion percentages for each student in Column B.
- In Column C, indicate the "Status" as "Completed" (for students with a completion percentage of 70% or higher) or "Incomplete" (for those with less than 70%).
- Create a pie chart to visually represent the distribution of "Completed" and "Incomplete" students.
- Create a bar graph to compare the completion status of each student.

Data entry:

Step 1: Open Excel and Create a New Worksheet

1. Open Microsoft Excel.
2. Create a new worksheet by clicking on "File" or "New" and selecting "Worksheet" or using the keyboard shortcut "Ctrl + N."

Step 2: Set Up Your Columns

3. In your new worksheet, label the columns as follows:
 - Column A: Student Names or IDs
 - Column B: Completion Percentages
 - Column C: Status (to be calculated)

Step 3: Enter Student Names or IDs

4. In Column A, start entering the names or IDs of the students who completed the assignment. Each student's name or ID should go in a separate cell, starting from A2 (typically, with headers in A1).

Step 4: Enter Completion Percentages

5. In Column B, enter the completion percentages for each student. You can either use actual data if you have it, or you can generate random percentages for demonstration purposes using a formula. If you want to generate random percentages for demonstration, enter the following formula in cell B2:

=RANDBETWEEN(70, 100)

6. Copy this formula down to generate percentages for each student, or manually enter the actual completion percentages.

Step 5: Calculate "Status" in Column C (If Necessary)

7. If you want to calculate the "Status" in Column C based on the completion percentages in Column B, enter the following formula in cell C2 to indicate whether each student is "Completed" or "Incomplete":

=IF(B2 >= 70, "Completed", "Incomplete")

8. Drag the fill handle (a small square at the bottom-right corner of the cell) down to apply this formula to all the cells in Column C corresponding to the students.

By following these steps for data entry, you'll have successfully set up your Excel worksheet with the necessary information about the students' names or IDs and their completion percentages. ,

	A	B	C
1	Names	Completion	Status
2	Bharath K	99	Completed
3	Amulya	89	Completed
4	Yogesh	78	Completed
5	Nani	97	Completed
6	Chekitha	73	Completed
7	Hemanth	88	Completed
8	Lavanya	91	Completed

10			
11			

Gradient Fill:

To apply conditional formatting with gradient fill in the percentage section (Column B) of your Excel worksheet, follow these steps:

Step 1: Select the Range

1. Select the range of cells in Column B (the completion percentages) that you want to format. This range should include all the percentage cells.

Step 2: Apply Conditional Formatting

2. Go to the "Home" tab in the Excel ribbon.

Step 3: Choose Conditional Formatting Rules

3. Click on the "Conditional Formatting" dropdown button, usually found in the "Styles" group.

Step 4: Select Color Scales

4. From the dropdown menu, choose "Color Scales."

Step 5: Choose a Gradient Fill Color Scale

5. You will see various color scale options. Select one that suits your preference. Color scales typically include a gradient that transitions from one color to another, indicating low to high values. For example, you can choose "Green - Yellow" or "Red - Yellow - Green."

Step 6: Customize the Gradient Fill (Optional)

6. If you want to customize the color scale further, you can click on "More Rules" at the bottom of the menu.

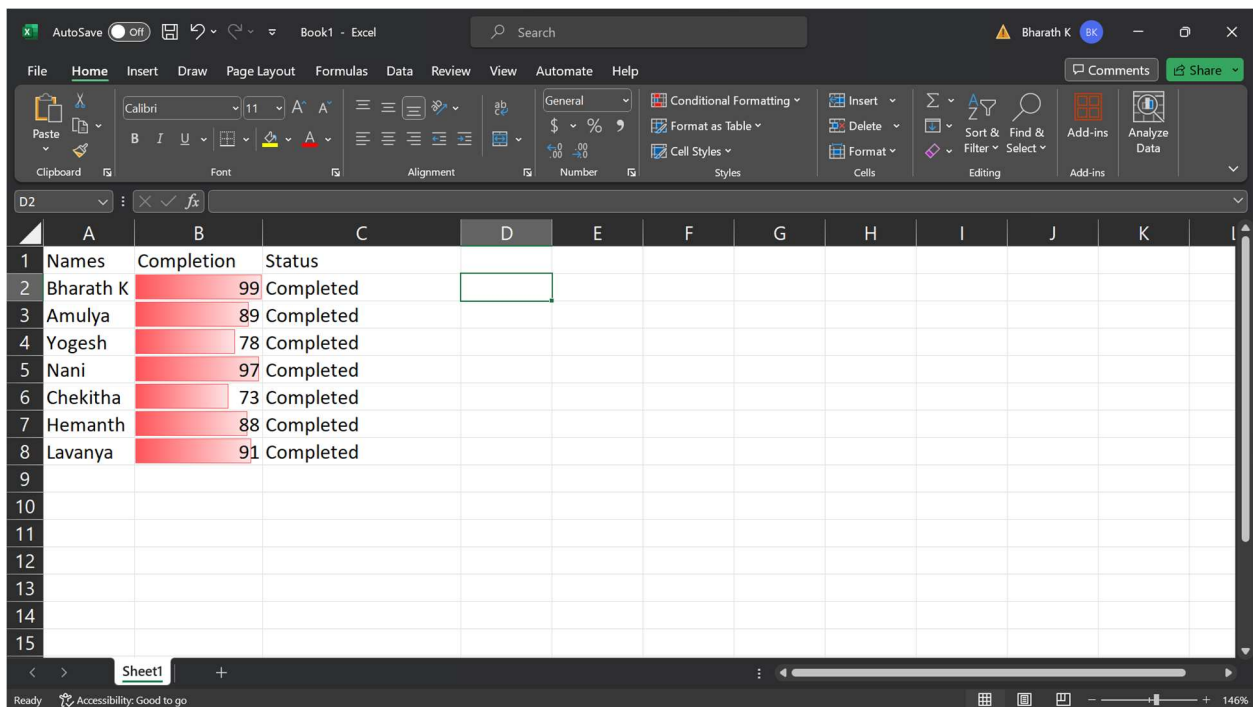

Step 7: Set the Minimum and Maximum Values

7. In the "New Formatting Rule" dialog box, you can customize the minimum and maximum values and the corresponding colors for the gradient. For example, you can set the minimum value to be 0% (lowest percentage) and choose a color, and set the maximum value to be 100% (highest percentage) and choose a different color.

Step 8: Apply the Formatting

8. Click "OK" to apply the formatting to the selected range of cells.

The selected range of cells in Column B will now have conditional formatting with a gradient fill, where the color will change smoothly from one end of the scale to the other based on the values in the cells. This provides a visual representation of the completion percentages using a gradient color scale. Adjust the gradient color scale and formatting rules to suit your preferences and the context of your report.

Creation of Pie Chart

To create a pie chart in Microsoft Excel based on the data in your worksheet, follow these steps:

Step 1: Select the Data

1. Click and drag to select the data you want to include in your pie chart. In your case, select both the "Completed" and "Incomplete" students' statuses in Column C, as well as their corresponding labels in Column A.

Step 2: Insert a Pie Chart

2. After selecting the data, go to the "Insert" tab in the Excel ribbon.

Step 3: Choose a Pie Chart Style

3. In the "Charts" group, click on the "Pie Chart" icon. You will see various pie chart styles to choose from, such as 2D pie, 3D pie, or exploded pie. Select the style you prefer.

Step 4: Customize the Pie Chart

4. Your pie chart will be inserted into the worksheet. You can now customize it:

- Add a chart title by clicking on the "Chart Title" text box above the chart and typing a title.
- Label the segments of the pie chart by right-clicking on the chart and selecting "Add Data Labels."
- Adjust the colors, styles, and other formatting options by clicking on various chart elements and using the "Chart Tools" in the Excel ribbon.

Step 5: Resize and Position the Pie Chart (Optional)

5. To resize and position the pie chart, click and drag on the chart to move it to your desired location. You can also click on the corner handles to resize it as needed.

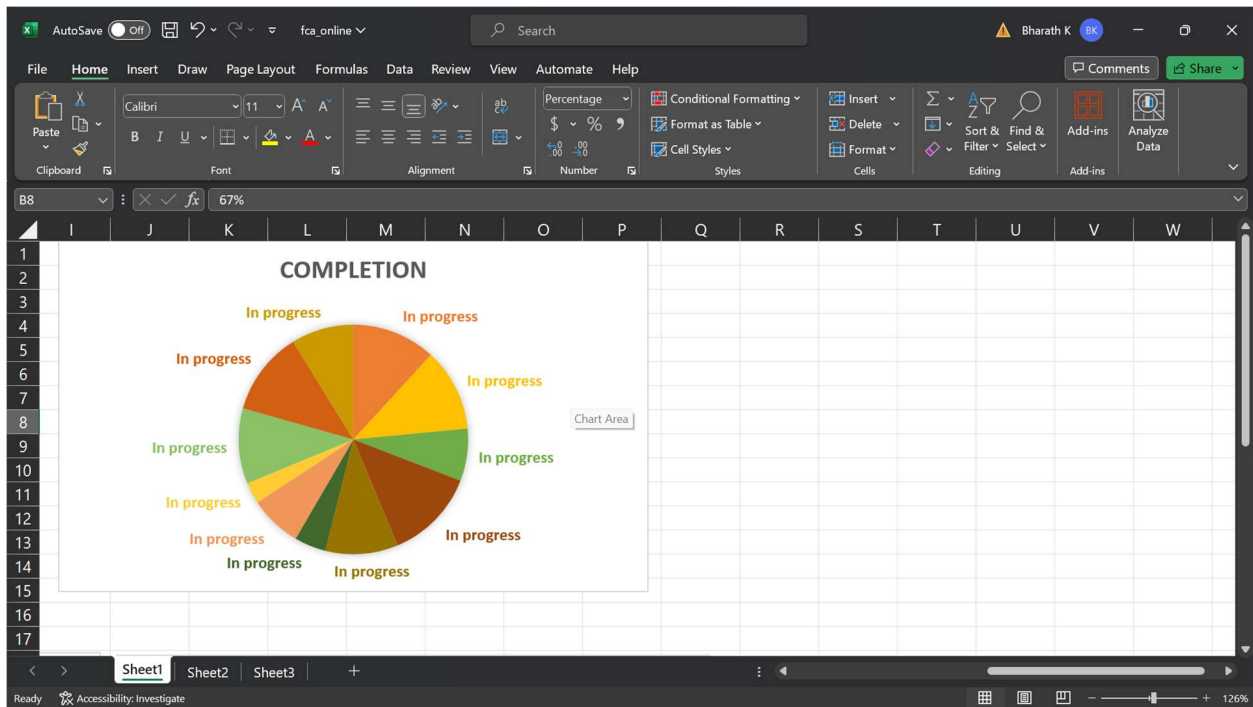

Step 6: Legend (Optional)

6. If you want to include a legend, click on the chart to select it, then click on "Chart Elements" (the plus icon usually located to the top right of the chart) and check "Legend."

Step 7: Save and Share

7. Save your Excel worksheet to retain the pie chart. If required, follow your instructor's instructions for sharing the report.

Your pie chart will visually represent the distribution of "Completed" and "Incomplete" students in your assignment report. Customize it to match your report's style and requirements.

Creation of Graph's

To create a bar graph (column chart) in Microsoft Excel based on the data in your worksheet, follow these steps:

Step 1: Select the Data

1. Click and drag to select the data you want to include in your bar graph. In your case, select both the student names or IDs in Column A and their corresponding completion percentages in Column B.

Step 2: Insert a Bar Chart

2. After selecting the data, go to the "Insert" tab in the Excel ribbon.

Step 3: Choose a Bar Chart Style

3. In the "Charts" group, click on the "Bar Chart" icon. You will see various bar chart styles to choose from, such as clustered column, stacked column, or 3D column. Select the style that best suits your data presentation.

Step 4: Customize the Bar Chart

4. Your bar chart will be inserted into the worksheet. You can now customize it:

- Add a chart title by clicking on the "Chart Title" text box above the chart and typing a title.
- Label the bars with data values by right-clicking on the chart and selecting "Data Labels."
- Adjust the colors, styles, and other formatting options by clicking on various chart elements and using the "Chart Tools" in the Excel ribbon.

Step 5: Resize and Position the Bar Chart (Optional)

5. To resize and position the bar chart, click and drag on the chart to move it to your desired location. You can also click on the corner handles to resize it as needed.

Step 6: Legend (Optional)

6. If you want to include a legend, click on the chart to select it, then click on "Chart Elements" (the plus icon usually located to the top right of the chart) and check "Legend."

Step 7: Save and Share

7. Save your Excel worksheet to retain the bar graph. If required, follow your instructor's instructions for sharing the report.

Your bar graph will provide a clear comparison of the completion status of each student in your assignment report. Customize it to match your report's style and requirements.
