

Q. What are the reasons behind the success of Yantra Nagari Katha ? Explain

The name Yantra Nagari Katha suggests how it originated. With the birth of automatic machines, the story of Yantra Nagari was also born. In other words, it was born almost two centuries before Kay. But we did not realize it at the time of birth. It took a long time to realize the effect of Yantra Nagari Katha. As the production process becomes more automated, machine-made goods disappear, the peasantry migrates to cities, the rural poor join factories as laborers, the market is reshaped, forests disappear, cities grow, the machine citizen. The story had an impact on our lives. In Europe and America, this process happened a little earlier. In the backward countries, success was achieved, albeit late. There are three main reasons behind the success of Yantra Nagari Katha. 1. Expediency 2. Existence from the eyes of scriptures and prophets. 3 The greatness of knowledge. or y jnanika hindne le

All the three reasons given here are the reasons that should not be given easily. Now these It is good to have a separate discussion.

1. Usefulness of machines:

It is true that machines have made human work easier. Complaints are close due to machines. The mind is amused. Food production has increased. Death is late. Deserts are wild. The sun is cool. Mane Math Road Se tuves are safe. The problem of wild animals has been eliminated. It is not an easy thing for humans to give up the happiness that machines provide. Similarly, those who are against the machine civilization are trying to preserve the privileges provided by the machines and solve the negative effects caused by the machines, but is it possible? So the machine civilization has achieved success according to the expectations of man. 2. It is out of sight of the scriptures and prophets. There is no doubt that the religious institutions and religious gurus are the worst opponents

of the Yantra Nagari story. Fall of moral values, disdain for God, disdain for culture, disdain for gurus, arrogance to stop machine creation in return for God's prosperity. Today, in most European countries, especially northern European countries, churches are more or less empty. The fear that modern man does not need God has deeply haunted institutional religion. Yet religious institutions have failed in the face of machine civilization. These are the points that have been found after analyzing the ideas of what could be in depth. Machines preached religion No scriptures can be reviewed by automated machines. This may be because the scriptures were created or the prophets lived before the industrial revolution. But Gurus could have done that work, but they didn't. Most Gurus

propagated religion using machines.

The problem with religious gurus is that they analyze today's life through the scriptures, not the scriptures through today's life. So most of the religious gurus are soft on the machines and oppose the story of Atta Yantra Nagari. This has led to a strange kind of duality. Therefore, regardless of the dual position of the religious gurus, the machine civilization has grown unscathed and achieved success. 3. Scientific glory of machines

Science is a great branch of knowledge that helps us understand the physical world. Thousands of scientists He built this branch with knowledge of his life. Science has solved many problems such as superstitions, mental illusions, etc. Machines are the products of science. The rightly due respect to science is also due to machines like inheritance property to the bully son. Thus the machine civilization achieved success based on these important factors. Thus Prasanna gives the important and simple reasons for the success of the machine civilization.
