

PIC Lab Questions

1. Operators

- a. Calculate employee gross salary using TA, DA, HRA and basic salary.
- b. Swap values of two variables without using temporary variables.

2. Control Statements

- a. To check whether a number is even or odd.
- b. To perform arithmetic operations using switch-case

3. Looping Statements

- a. To find the sum of first N natural numbers using While loop.
- b. Check whether the number is palindrome or not using For loop

4.

- a. Count the number of digits in a given number using do while.

5. Arrays

- a. Find the largest and smallest element in a single dimensional array.
- b. Write a program to implement Bubble sort.

6.

- a. Add two matrices using two dimensional arrays.

7. Functions

- a. Calculate the Factorial of a given number using functions.
- b. Generate N Fibonacci numbers using a recursive function

8. String

- a. Print the length of a given string.
- b. Concatenate two strings using the string handling function.

9. Pointers

- a. To swap the values of two variables using pointers.
- b. To find the area and circumference of a circle using pointers and functions.

10. Structures

- a. To create and use a structure for student data.
- b. To create and use a structure for an Employee data.

11. Unions

- a. To create and use a Union for Car data.
- b. To create and use a Union for Job data.

12. Files

- a. Create a file to hold the data of employees input and output data from it.
- b. Write a sentence in a file and convert all lower case alphabets to uppercase and vice versa
