- Overview of Word processor, Basics of Font type, size, color, Effects
- like Bold, italic , underline, Subscript and superscript, Case changing
- options, Inserting, deleting, undo and redo, Copy and Moving (cutting)
- text within a document, Formatting Paragraphs and Lists, Setting line
- spacing; single, Page settings and margins including header and footer,
- Spelling and Grammatical checks, Table and its options, Inserting rows
- or columns, merging and splitting cells, Arithmetic Calculations in a
- Table, Working with pictures, Inserting Pictures from Files, Using
- Drawings and WordArt; Lines and Shapes, Modifying Drawn Objects,

- Formatting Drawn Objects, options for Creating and Modifying a
- WordArt Object

- word processor is a software program capable of creating, storing, and printing typed documents.
- Today, the word processor is one of the most frequently used software programs on a computer, with Microsoft Word being the most popular word processor.
- Word Processing refers to the act of using a computer to create, edit, save and print documents.
- In order to perform word processing, specialized software (known as a Word Processor) is needed. One example of a Word Processor is Microsoft Word, but other word processing applications are also widely used.
- The word “word processor” means it processes words with pages and paragraphs. Word processors are of 3 types which are
- electronic, mechanical, and software.

- a font is a particular size, weight and style of a typeface. Each font is a matched set of type, with a piece (a "sort") for each glyph. A typeface consists of a range of such fonts that shared an overall design.
- There are **five basic classifications** of typefaces:
 1. serif,
 2. sans serif,
 3. script,
 4. mono spaced, and
 5. display.

Totally **Over 200,000** fonts are there. **1001 Fonts** has thousands of choices for both personal and commercial use.

1. Title bar

It is a bar at the top of the window and it displays the title of the currently running application at task.

2. Menu Bar

It contains menus that provide lists of commands.

3. Status bar

It is an interactive strip at the bottom of the screen that acts as a communication link between the user and the program.

- **TWO TYPING MODES**
- **Insert Mode** – When text is typed between the existing words or characters it pushes the existing text forward without replacing them
- **Type over mode** – When text is typed between words or characters the new text automatically replaces the existing text by deleting it.
- **Formatting** - Applying various styles or features in order to enhance the document appearance

Text Formatting Features

- Changing font type, size style
- Changing font colour
- Underlining – Placing a line at the bottom of a text
- Bolding – Making the text appear more darker than the rest
- Italicizing –making the text slant forward
- Superscript and subscript
- Strikethrough

INSERT TAB

Within the INSERT ribbon there are several command tabs... :

PAGES
TABLES
ILLUSTRATIONS
LINKS
HEADER AND FOOTER
TEXT
SYMBOLS

- **On the slide, click where you want to add the symbol.** On the Insert tab, click Symbol. In the Symbol box, in the Font drop-down list, select (normal text) if it isn't already selected. In the Symbol box, in the Subset drop-down list, select Superscripts and Subscripts.

Word has been developed a change case option, which can be used **to change for uppercase, lowercase or sentence case** by just a few click.

- To undo an action, press **Ctrl + Z**. To redo an undone action, press **Ctrl + Y**. The Undo and Redo features let you remove or repeat single or multiple typing actions, but all actions must be undone or redone in the order you did or undid them – you can't skip actions.
- The “Redo” command is **the inverse of the “Undo” command**. It redoes an action that was undone. This is valuable if you accidentally click the “Undo” button too many times. You can also use the keyboard shortcut “Ctrl” + “Y” to redo the last action undone.

- Press **Ctrl+x** to cut, press **Ctrl+c** to copy, and press **Ctrl+v** to paste. To move selected text with the Cut command, click the Cut button on the Home tab of the Ribbon. To copy selected text with the Copy command, click the Copy button.

Formatting Paragraphs and Lists

- At the paragraph level, you apply indents, bullets, and line spacing.

...

Formatting Basics

- Characters. Use the Font dialog box (Alt+H, FN) to format characters. ...
- Paragraphs. Use the Paragraph dialog box (Alt+H, PG) to format paragraphs. ...
- Sections. Use the Page Setup dialog box (Alt+P, SP) to format sections.

Setting line spacing

- Select the paragraphs you want to change. **Select Home > Line and Paragraph Spacing, and choose the spacing you want.** To customize spacing, select Line Spacing Options. You can adjust several areas including spacing before and after paragraphs.

- **Click VIEW > Ruler.** Double-click the header or footer area. Press CTRL+A. On the ruler, drag the right indent marker.

ETD-Template-Page-Numbers-Top-with-ToC-tabs - Word

Tell me what you want to do...

If your page numbers are at the top of the page, the "Header from Top" setting should be .7 inches or less.

If your page numbers are at the bottom of the page, your "Footer from Bottom" setting should be .7 inches or less.

The page number should be within the 1 inch margin -- outside of the gridlines.

DEDICATION

Insert your dedication text here or delete this optional page.

- **Check spelling and grammar all at once**
- On the Review tab, click Spelling & Grammar.
- Word displays the issues it finds in the Spelling & Grammar dialog box.
- To address an issue, do one of the following: ...
- After you correct, ignore, or skip an issue, Word moves to the next one. ...
- Click OK to return to your document.

Table and its options, inserting rows or columns,

- **Add a row or column**
- Click where you want in your table to add a row or column and then click the Layout tab (this is the tab next to the Table Design tab on the ribbon).
- To add rows, click Insert Above or Insert Below and to add columns, click Insert Left or Insert Right.

- Click in a cell, or select multiple cells that you want to split. **Under Table Tools, on the Layout tab, in the Merge group, click Split Cells.** Enter the number of columns or rows that you want to split the selected cells into.

Arithmetic Calculations in a Table

- Click the table cell where you want your result to appear. On the Layout tab (under Table Tools), click Formula. In the Formula box, check the text between the parentheses to make sure Word includes the cells you want to sum, and click OK. **=SUM(ABOVE)** adds the numbers in the column above the cell you're in.

Item	Number	Cost	Total
Red widget	3	\$40.50	\$ 121.50
Green widget	5	\$20.50	\$ 102.50
Pink widget	10	\$35.00	\$ 350.00
Total cost			\$ 574.00
